92 to 146 kW

High Performance Components

Oustanding Strength Points

- Units with **R410A refrigerant** (it will be the real replacement of R22). As near azeotropic mixture it behaves like a homogeneous substance (**reduced service problems in case of leakage or re-charge**) with negligible temperature glide.
- Refrigerant with superior thermo-dynamical proprieties compared to R22 and R407C, it allows to have more efficiency or compact and lighter systems and larger operating limits (T ambient = -15 °C in heating mode).
- **2 independant refrigerant circuits** with 2 scroll compressors for each circuit.
- **Bi-flow electronic expansion devices** on all units : superheating value controlled by microprocessor, simple and accessible refrigeration system especially for heat pump versions with reduction of brazing points and then possible leakage.
- **V-shape condenser coils** ensuring compactness and small foot print.
- **High EER and COP** for fan coil application (water 12/7 °C cooling, 40/45 °C heating).
- **Excellent EER and COP** for floor heating application (water 23/18 °C cooling, 30/35 °C heating).
- **High SEER.**
- **2 acoustic versions** : BLN (Base Low Noise) and ELN (Extra Low Noise).
- **Heat recovery option** with desuperheater and total heat recovery.
- **Large choice of optional hydro kits** with or without buffer tank fitted on board of the chiller to perform package solution and plug & play concept.
- **Electric heaters fitted inside buffer tank** to ensure extra heating.
- For safety purpose when performing service operation, special valves dedicated to R410A are supplied on the refrigerant system. These valves, of 5/16" flare SAE type, are mounted on the liquid line and on the gauges manifold of the unit.

Specifications

General

The new **AQVL/AQVH** units have been designed to operate with **HFC 410A** refrigerant. Both compressors and heat exchangers (plate heat exchanger and coils) have been optimized for this refrigerant.

All the units are available either in **cooling only** or **heat pump** version. Each unit consists of **two independent refrigerant circuits** and is complete with high efficient and advanced technology components :

- Hermetic **Scroll** compressors with high efficiency and low vibration emissions,
- **Electronic expansion valves**,
- "True dual" circuit plate heat exchanger,
- Quiet fans located in externally mounted **nozzle profile housing** generating low sound levels,
- Controller using a **state-of-the-art microprocessor**.

The AQVL/AQVH units are available in **6 sizes and 4 versions** :

- **STD (Standard) version** : Designed in accordance with specifications described in the following sections.
- **HSE (High Seasonal Efficiency) version** : It has same equipment as that of the STD version, except that the units are equipped with **special inverter fans**, of large diameter, driven by **EC (electronic brushless type)** motors with **integrated electronic inverter**, to ensure low energy consumption.
- **HT (High Temperature) version** : It has same equipment as HSE units, but the **special inverter fans and motors** have a different regulation.
- **HPF (High Pressure Fan) version** : It has same equipment as STD units, except that the units are equipped with **special inverter fans** (same as those used on HSE version, but with a different regulation) driven by **EC motors** with **integrated electronic inverter**. The HPF version provides external static pressure up to **120 Pa**.

The STD and HSE versions can be supplied with **2 acoustic options** :

- **Base Low Noise (BLN)** : The units are equipped with **star or delta connected fan motors** depending on size. The chillers are not supplied with fan speed controller, but fitted with **compressors box** to reduce the noise emissions.
- **Extra Low Noise (ELN)** : The units are equipped with **star connected fan motors**, fitted with a speed controller which allows the units to operate with a very low rpm. The chillers are supplied with **compressors box** and **soundproof jackets** on compressors reducing significantly the noise emissions.

On the other hand, the HT and HPF versions can be supplied with BLN option only.

In addition, all the units can be supplied with **2 heat recovery options** :

- **Desuperheater** : All the versions can be supplied with plate type heat exchangers fitted, one on each refrigerant circuit, on the compressor discharge line to recover about **20 % of the total heat** rejected to the condensers.
- **Total heat recovery (AQVR units)** : All the versions of the **cooling only** units can be supplied with a double circuit plate type heat exchanger to recover **100 % of heat rejection** by the condensers. 4-way valves and a field installed control sensor are also provided to ensure the cooling/heat recovery mode changeover.

Cabinet and structure

The cabinet and structure are made of heavy gauge galvanized steel. **All galvanized steel components are individually painted** by a special painting process before the assembly of the unit. This painting system performs a homogeneous protection to the corrosion.

The painting is a polyester powder based type, coloured in **RAL 9001**.

The units are suitable for outdoor installation, directly on the building roof or at the ground level.

Refrigerant circuits

All the units are composed of two independent and separate refrigerant circuits, complete with 4 hermetic scroll compressors in tandem configuration for each circuit.

Each refrigerant circuit is equipped with liquid line and discharge line shut-off valves, filter-drier with solid core, sight glass and **electronic expansion valve (EXV)**.

The heat pump units (AQVH) are provided with 4-way reversing valves, suction accumulators and liquid receivers on the liquid lines.

The AQVL and AQVH units are both provided with double-circuit plate heat exchangers, of "true dual" type.

The total heat recovery units are supplied with double-circuit water condenser (of plate heat exchanger type), 4-way reversing valves and liquid receivers downstream of the heat recovery condenser.

The functional diagram of each circuit is shown in the section "Refrigerant flow diagram".

Specifications (continued)

Compressors

Each unit is equipped with 4 hermetic scroll compressors arranged in tandem configuration per refrigerant circuit.

The compressors are fitted with an electronic control device which ensures protection of compressors against :

- overheating and overloading,
- reversal rotation and phase loss.

All compressors have direct-on-line starting and are mounted on rubber vibration isolators in order to minimize noise and vibration transmission.

Evaporator

Evaporator is of a "Dual Circuit" brazed stainless steel plate type heat exchanger. It is insulated with a 19 mm thick closed cell polyethylene foam material and is fitted with a film type electric heater on the external surface to prevent the unit from freezing at a low temperature (down to -18 °C) when the unit is off.

Condenser coils

The condenser coils are made of seamless copper tubes, arranged in staggered rows, mechanically expanded into corrugated aluminum fins.

They are mounted in V-shape arrangement, allowing the unit to be compact with small foot print.

The coils are supplied with blue fins on AQVH units to facilitate the flowing of water droplets during defrost cycles.

Condenser fans

All acoustic versions (BLN & ELN) are equipped with large diameter, direct drive axial type fans with asynchronous three-phase motors.

Fans are fitted with externally mounted nozzle profile housing which generates low sound levels.

Fan speed control

The airflow is controlled in order to operate at a low ambient temperature.

On standard unit equipped with axial fans, the air flow control is :

- step type for BLN version without fan speed controls, achieved by switching off some fans of each circuit in function of condensing pressure corrected by external temperature.
- stepless type for ELN version, achieved by an electronic fan speed control, supplied as standard, in function of condensing pressure.

The pressure actuated stepless type fan speed controller can be supplied as optional on BLN version. It allows the units to operate in cooling mode at ambient temperature down to -18 °C.

Electrical board

The electrical board is located in a metal case arranged outside the unit and protected by a vertically pivoted access door. The metal case has an IP54 protection rating and is complete with grilles for natural air ventilation.

Electronic control

The units are supplied with the new microprocessor-based electronic control and management system ensuring the following functions :

- Management of the operation of compressors :
 - a) Power on/off
 - b) Anticycle management
 - c) Tandem unloading for high pressure or high compressor pressure ratio (integrated inside the curves of compressor operating limits).
- Chilled and hot water temperature regulation (control option on inlet water temperature RWT (PID) or outlet water temperature LWT (neutral band type) of the evaporator).
- Control of superheating on suction line.

- Evaporator antifreeze protection.
 - Heat pump defrost control for automatic operation.
 - Management of high and low pressure alarms.
 - Management of the electronic expansion valves by means of EXV controller allowing optimized functions : cooling, heating, start-up and defrost.
 - Management of external interlocks.
 - Management of the remote control :
 - d) Unit power on/off
 - e) Summary alarm signals
 - Remote signalling, by dry contacts :
 - f) Voltage presence
 - g) Compressors in operation
 - h) Circuit alarm unit
 - Management of the hydro kit : start-up of pump, antifreeze heater of external tank.
 - Management of the heat recovery mode by means of inlet water temperature sensor at the heat recovery condenser.
- The unit controller can also clearly show all control parameters of the machine on the liquid crystal display, such as :
- Display of superheating value.
 - Display of the temperature at the evaporator inlet and outlet.
 - Display of the ambient air temperature.
 - Display of the circuit 1 and circuit 2 discharge pressure and suction pressure.
 - Display of the set point.
 - Display of opening steps of EEV.
 - Display of speed control signal (voltage) of fans.
 - Display of the various alarm and operation status :
 - i) Compressor start-up alarm (discharge pressure check)
 - j) Low / High pressure
 - k) Low / High super-heating
 - l) Evaporator antifreeze
 - m) Flow switch signal for lack of water
 - n) Control of the compressor operating hours
 - o) Compressors in operation
 - p) Pump in operation and operating hours
 - q) Thermal protection of compressors
 - r) Thermal protection of fans
 - s) Faulty sensors

Control and safety devices

Each unit is fitted with the following devices :

Safety :

- Power disconnect switch with an emergency stop function.
- HP switches (double on each circuit), set to 40.5 bar, automatic reset and manual reset from the control panel.
- Flow switch on the evaporator side.
- Antifreeze temperature sensor (set to +4 °C) on the evaporator (AQVL/AQVH only).
- Safety valve on the discharge line and the liquide receiver (on AQVH), set to 45 bar.

Specifications (continued)

Control :

- HP and LP transducers (two for each circuit).
- Evaporator water inlet temperature sensor.
- Evaporator water outlet temperature sensor (with an antifreeze function).
- Suction temperature sensor for EXV control.
- Ambient air temperature sensor.
- Coil temperature sensors.
- Heat recovery condenser temperature sensor (AQVR only).

Conformity with standards

The following applies to all the sizes and versions of AQVL/AQVH/AQVR units :

- ✓ Machine Directive : 2006/42/EC
- ✓ Low Voltage Directive : 2006/95/EC
- ✓ Electromagnetic Compatibility Directive : 2004/108/EC
- ✓ Pressure Equipment Directive : 97/23/EC

Standard equipment

- ✓ Back light display.
- ✓ Digital pressure and temperature reading kit.
- ✓ High ambient pressure control.
- ✓ Double set point (AQVL/AQVH only).
- ✓ Sequence phase control.
- ✓ Electronic expansion valves.
- ✓ Control circuit transformer 400 V/230 V.
- ✓ Data logger.
- ✓ Power supply single point box.
- ✓ Power supply without neutral.
- ✓ Hour meter.
- ✓ Main switch.
- ✓ Refrigerant R410A.
- ✓ PED approval.
- ✓ Blue fin coils (AQVH only).
- ✓ Evaporator antifreeze electric heater.
- ✓ Compressor jacket (ELN version only).
- ✓ Compressor box.
- ✓ Rubber anti-vibration pads.

Optional hydro kits

All hydro kits are supplied fitted inside the unit with or without buffer tank. They are available for AQVL and AQVH units only.

- **1P** : 1 low or high pressure pump kit with relevant accessories.
- **2P** : 2 low or high pressure pump kit with relevant accessories.
- **3P** : 3 low or high pressure pump kit with relevant accessories.
- **1P+T** : 1P kit + buffer tank covered with insulation and fitted with an antifreeze electric heater.
- **2P+T** : 2P kit + buffer tank covered with insulation and fitted with an antifreeze electric heater.

When thermodynamic heating is not sufficient, optional electric heaters can be provided inside buffer tank to ensure extra heating.

Factory-installed options

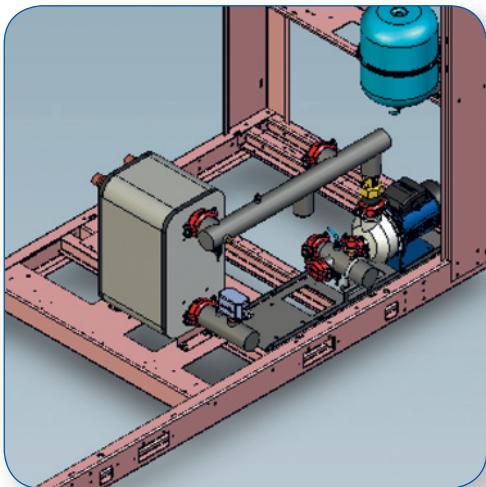

- ✓ ModBus protocol kit for BMS.
- ✓ Lonwork protocol kit for BMS.
- ✓ Bacnet protocol kit for BMS.
- ✓ WEBctrl.
- ✓ Ethernet TCP/IP interface board.
- ✓ Compressor soft starter.
- ✓ Pressure actuated stepless fan speed controller for low ambient operation (-18 °C) (BLN version).
- ✓ Power factor correction capacitors.
- ✓ Compressor overload protection.
- ✓ Automatic circuit breaker.
- ✓ GSM.
- ✓ HP & LP manometers.
- ✓ Condenser coils with "Fin Guard Silver" (polyurethane) treatment.
- ✓ Condenser coils with copper fins.
- ✓ Condenser coils with black epoxy treatment.
- ✓ Coil guards.
- ✓ Chiller grilles.
- ✓ Compressor jacket.
- ✓ Total heat recovery (AQVR).
- ✓ Desuperheater.
- ✓ On board hydro kits.
- ✓ Electric heaters inside buffer tank, used as extra heating.
- ✓ Automatic pump switch on 2 pump kit.
- ✓ Antifreeze electric heater for hydraulic manifolds.

Field-installed accessories

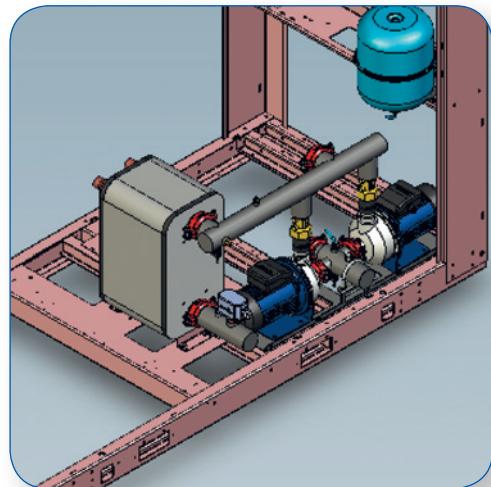

- ✓ Remote keyboard panel.
- ✓ Master and slaves control, up to 4 units max.
- ✓ Chiller grilles.
- ✓ Pressure switch.
- ✓ Water filter.

Hydro Options

Unit Clearances (in mm)

Installation of single units

Installation of several units

No more than one wall can be higher than the unit.

The area enclosed by the wall must be kept clear of all obstructions that would impede air flow to the unit. Dimensions in mm.
